

Shilpa Kala – Project Requirement Report

Introduction

Shilpa Kala is an Android application developed to support artisans and self-employed craftsmen in creating professional digital product portfolios. The application helps users capture product images, add branding and product details, save processed images to the gallery, and share them through social media platforms.

Problem Statement

Traditional artisans often face challenges in presenting their handmade products professionally on online platforms. Most users do not have access to advanced editing tools or professional photography systems. This application solves the problem by providing a simple and user-friendly mobile platform for capturing, processing, branding, and sharing product images.

Objectives

- Capture product images using CameraX API
- Add branding and product details to images
- Save processed images in the device gallery
- View saved images in gallery format
- Share images through WhatsApp and social media

Technologies Used

- Android Studio
- Kotlin Programming Language
- XML for UI Design
- CameraX API
- Bitmap Image Processing
- GitHub for Version Control

System Requirements & Features

Requirement	Description
Operating System	Android 8.0 or above
Programming Language	Kotlin
Development Tool	Android Studio
Storage	Device Gallery Storage
Internet	Required for GitHub and Sharing

Main Features

1. Home Screen for navigation
2. Guided Camera Screen for image capture
3. Product Details Input Screen
4. Professional Image Processing with branding
5. Gallery View for saved images
6. Share feature for social media platforms

Conclusion

The Shilpa Kala application provides a simple and effective digital solution for artisans to improve product presentation and branding. The application enhances visibility of handmade products and supports self-employment opportunities through digital portfolio creation.
